PROFESSIONAL SUMMARY

Computer Science Graduate (BSc) at Nile University of Nigeria with hands-on experience in data analysis, AI engineering, and data pipeline work across two internships; seeking to become a Cloud Data & AI Engineer building end-to-end data systems. Skilled in Python, SQL, Power BI, and ETL processes, with a portfolio spanning AI-powered analytics applications, large-scale exploratory data analysis, and machine learning integration. Currently pursuing the Google Cloud Professional Data Engineer Certificate. Seeking remote roles in data engineering, AI engineering, data analytics or data science.

EDUCATION

Bachelor of Science in Computer Science | Nile University of Nigeria *June 2026*

Abuja, Nigeria

EXPERIENCE

Data Science & AI Intern | MRT Net Solutions Ltd *July 2025 – September 2025*

- Performed exploratory data analysis on a 114,547-row dataset, identifying anomalous weather patterns in 2012 using rolling-mean trend analysis with Python (Pandas, Matplotlib).
- Built and deployed an AI-powered data analysis web app using Bolt.new, VS Code, and OpenAI API, featuring Google OAuth 2.0 authentication and a conversational data-upload interface.
- Designed and implemented two interactive assessment landing pages in Odoo (HTML/CSS/JS) for a Strategic Planning GPT product, including a dynamic gauge-based results page with personalized recommendations.
- Created AI-generated marketing assets using Google Whisk for five product GPTs (HR, Finance, SME, Legal, NGO Advisor), reducing design turnaround time significantly.
- Resolved cross-platform code integration issues between AI-generated code (ChatGPT, Claude, Bolt.new) and Odoo's CMS, separating HTML, CSS, and JavaScript into compatible template headers.
- Automated research and documentation workflows using AI prompting (ChatGPT, DeepSeek, Claude), improving team information retrieval speed across ongoing projects.

IT & Database Intern | Fiscal Responsibility Commission (FRC) *July 2024 – September 2024*

- Built a MySQL database for internal mail tracking across departments, writing queries (INSERT, UPDATE, SELECT, ORDER BY) for data entry, retrieval, and modification — completed within one week.
- Maintained and updated the commission's official web portal using PHP and Python, performing weekly backups and implementing SEO techniques to improve accessibility and content relevance.
- Diagnosed and resolved a firmware malware boot-loop on a staff tablet: extracted the eMMC hard drive, removed the malware using Avast + RAV Endpoint Protection, and recovered corrupted files with TenorShare 4DDiG.
- Collaborated with the ICT department to deploy and configure department-level Wi-Fi MiFi routers, segmenting the network by department to resolve congestion across the commission's new building.
- Set up and coupled new desktop computers, UPS units, printers, and peripheral devices across multiple departments during the commission's office relocation.
- Provided IT support including USB hardware repair (soldering), network security configuration, and general troubleshooting.

PROJECTS

AI-Powered Smart Microgrid Analytics and Optimization | *Completed – Final Year Project due June 2026* | *GitHub* | *Web App Link*

- Designed a globally scalable web application for smart microgrid analytics, analysing 16 years (2008–2024) of electricity demand, renewable energy generation, and battery storage data across 4 countries: Nigeria, Australia, Germany, and Canada.
- Implemented predictive analytics and intelligent decision-making using machine learning to reduce energy waste and operational costs.
- Integrated secure Sign in with Apple (OAuth 2.0), Google and Microsoft authentication for enhanced user security in the production app.

AI Data Analysis Assistant | *Completed* | *GitHub* | *Web App Link*

- Built an AI-powered data analysis assistant enabling natural language EDA over structured datasets using Gemini API
- Designed backend pipeline for prompt engineering, dataset preprocessing, and structured insight generation
- Integrated API-based inference workflow for automated analytical reporting

Exploratory Data Analysis – Sales Dataset | *Completed* | *GitHub*

- Performed large-scale data cleaning, analysis, and visualization on 113,037 rows using Python (Pandas, NumPy) and Power BI, generating actionable business insights through statistical analysis.

Algorithmic Trading Strategy | *Completed* | *GitHub*

- Developed and back tested an automated trading strategy using Pine Script, implementing technical indicators to validate trading logic on historical market data.

Restaurant Web Application | *Completed* | *GitHub*

- Built a full-functionality restaurant web application featuring user authentication, menu management, and order processing using REST APIs.

Android Mobile Applications – Calculator & Currency Converter | *Completed* | *Calculator* | *Currency Converter*

- Developed two native Android applications using Android Studio: a fully functional calculator and a live currency converter.
- The currency converter integrates real-time exchange rate data, demonstrating practical experience with API consumption and dynamic data handling on mobile platforms.

SKILLS

Technical Skills

- Python, SQL, R
- Pandas, NumPy, Scikit-learn, Matplotlib
- Power BI
- HTML, CSS, Javascript
- Java, C++
- Prolog

Cloud & Data Engineering

- BigQuery
- Google Cloud Storage
- Apache Iceberg
- ETL pipelines

AI / ML

- OpenAI API

- Vertex AI

Tools

- Git, VS Code, Jupyter, WordPress Odoo, Bolt.new

CERTIFICATIONS

Apple Developer Program (Active — ID: TMR3B9AKAK)

- Active membership with full access to App Store Connect, TestFlight, and development resources.
- Expertise in implementing Sign in with Apple and OAuth 2.0 authentication protocols.

IBM Data Science Coursework — Coursera (6 Individual Course Certificates)

- Completed: What is Data Science? · Tools for Data Science · Data Science Methodology · Python for Data Science, AI & Development · Python Project for Data Science · Databases and SQL for Data Science with Python.

Google Cloud Certification: Cloud Data Engineer (In Progress)

- Covering data pipelines, BigQuery, data modelling, ETL workflows, and cloud data storage
- Building hands-on projects using Google Cloud services
- Gaining practical understanding of scalable data engineering systems

Tata Data Visualisation: Empowering Business with Effective Insights Job Simulation on Forage

- Completed a simulation involving creating data visualizations for Tata Consultancy Services
- Prepared questions for a meeting with client senior leadership
- Created visuals for data analysis to help executives with effective decision making

British Airways Data Science Job Simulation on Forage

- Completed a simulation focussing on how data science is a critical component of British Airways' success.
- Scraped and analysed customer review data to uncover findings.
- Built a predictive model to understand factors that influence buying behaviour.
